Data sheet no.: TDSSHOCK016 Issue No. 1. October 2023

Product: Shock Arrestor

Codes: SHOCK016

Product Overview:

A water shock arrestor is a compact mini vessel designed to be fitted close to an appliance or fixture to eliminate the noise created by water hammer. Water hammer is caused during a pressure surge within a potable water system.

A shock arrestor is installed on the cold water mains of a combi boiler if you have composite hydro-block.

If you have quick shut off taps or valves, shockwaves can go back through the pipe line and boiler which can cause increased wear and tear on composite components. In turn, these shockwaves also create a vacuum which adds to this wear and tear.

Features & Benefits:

Kiwa approved
Pre charged to 3.5bar
EPDM membrane, suitable for potable water
Stainless-steel body
Easy service with Schrader valve
Flat faced ½" BSP taper
Operating range between -10°C – 100°C

Suitable for:

Potable water
Combi boiler
System boiler
Taps
Washing machines
Water heaters
Showers
Anywhere you have a main feed to a sudden stop
